CAREER OBJECTIVE

Detail-oriented web developer with a strong foundation in front-end development. Passionate about creating visually appealing, user-friendly websites. Seeking opportunities to drive innovation, exceed client expectations, and advance my career in web development.

SKILLS

Expertise : HTML | CSS | Bootstrap | Tailwind | React | React-Router

Comfortable : Javascript | Es6 | Firebase | Express js | Rest API's

Familiar : Node Js | MongoDB

Tools : Github | Vs Code | Git | Vercel | Netlify | Figma

Interpersonal: Good communication | Quick learner | Hard working | Ability to adapt to new technologies in a short time.

PROJECTS

- **ArtZone: Art Teaching Website** [Live](#) | [Github](#) > [Client](#) | [server](#)
 - Implemented role-based security in the dashboard to restrict access to certain pages based on user roles. Students are not allowed to access teacher or admin pages, and similarly, admins or teachers are not allowed to access student pages.
 - Teachers can add, delete, and update courses, while also viewing their own classes. The system includes a payment gateway for students to buy courses and pay fees using card payments.
 - Admin can make admin or teacher from a user and manage all classes. admin can also give the teacher class feedback.

Technologies: React js, Express js, MongoDB, Stripe, Axios, reactQuery, Tailwind, Firebase.

- **Tiny Car: A toy marketplace** [Live](#) | [Github](#) > [Client](#) | [server](#)
 - Integrated interactive carousel to enhance user experience and showcase effectively
 - Secure user authentication with Firebase and JWT for Server side authentication.
 - Users can add new products, delete products, and update products dynamically

Technologies: React js, Tailwind, Sweeper, Firebase, DaisyUi, Express js, MongoDB

- **Super Chef's: Recipe sharing website** [Live](#) | [Github](#) > [Client](#) | [server](#)
 - Unique, eye-catching, modern-looking, and mobile responsive.
 - added a lazy loader to enhance image loading time and improve user experience.
 - All data is dynamically loaded from MongoDB by using node, express, and rest APIs.

Technologies: React js, Tailwind, DaisyUi, Sweeper, Firebase, Express js, MongoDB
